

semicolon

Design Thinking Module 1:

Introduction to Design Thinking

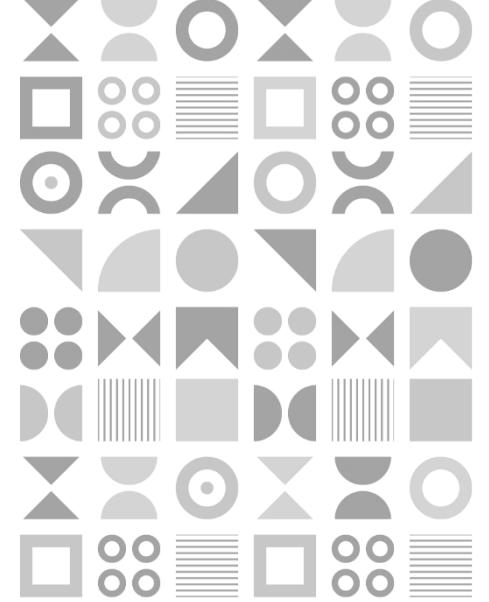

Learning Objectives

By the end of this lesson, you will:

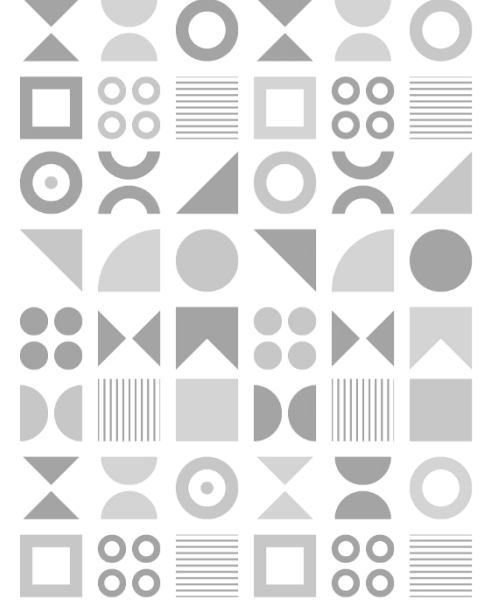

- Know what we will cover in the design thinking segment
- Understand term “Design Thinking”
- Understand the processes and mindsets of Design Thinking
- Start to reflect on design thinking in your own life/work, particularly in the context of social innovation

Course Logistics

Course will involve:

- Individual work
- Team work
- Videos
- Readings
- Field work or trips

What is Design Thinking?

Design Thinking is:

- An approach to developing innovative solutions that are desirable, feasible, and viable
- A way of thinking and working as well as a collection of methods

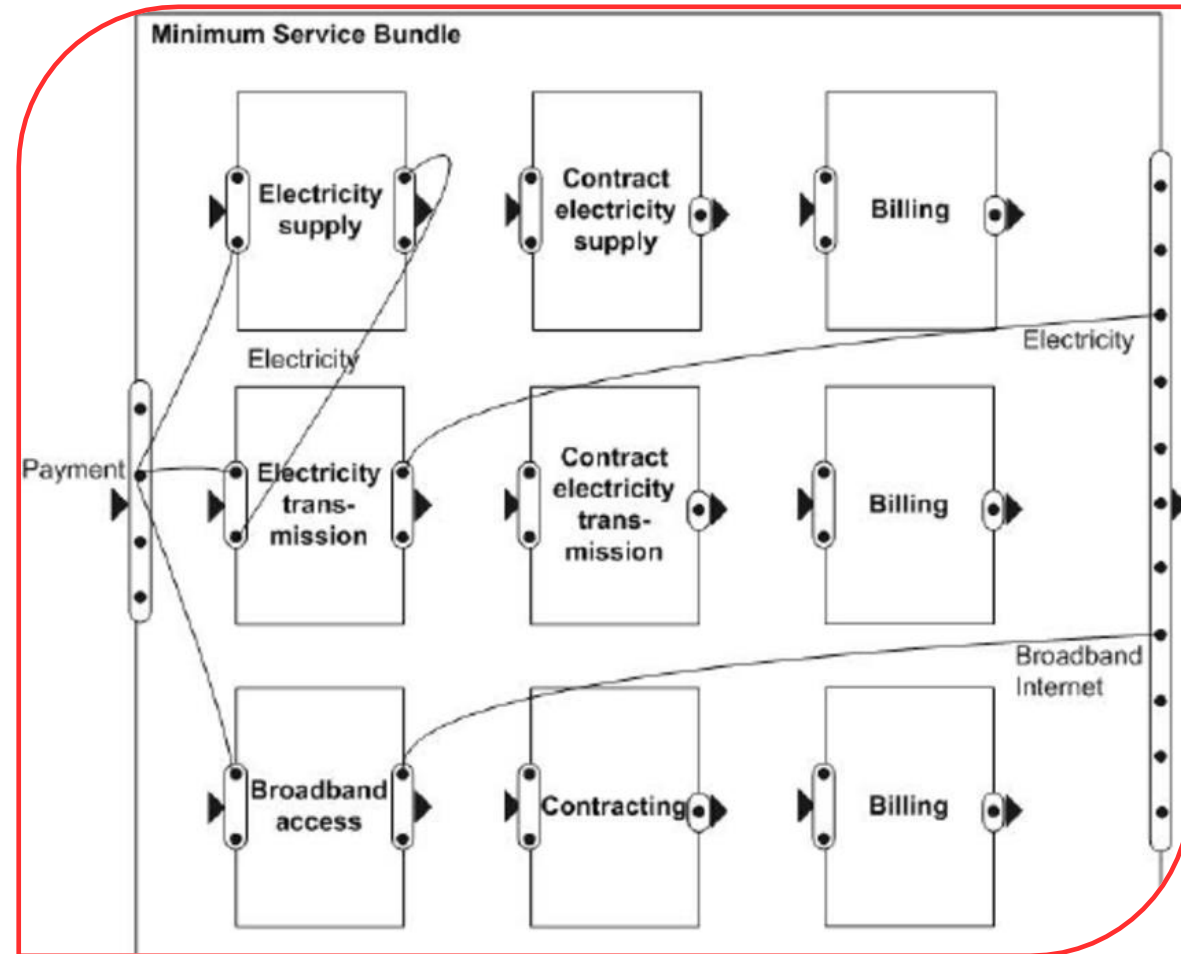

What Can We Design?

Products

What Can We Design?

How might we design delivery of uninterrupted power?

What Can We Design?

Spaces

How might we design a Danfo,
your class, Sabo Bus Stop,
a banking hall etc.

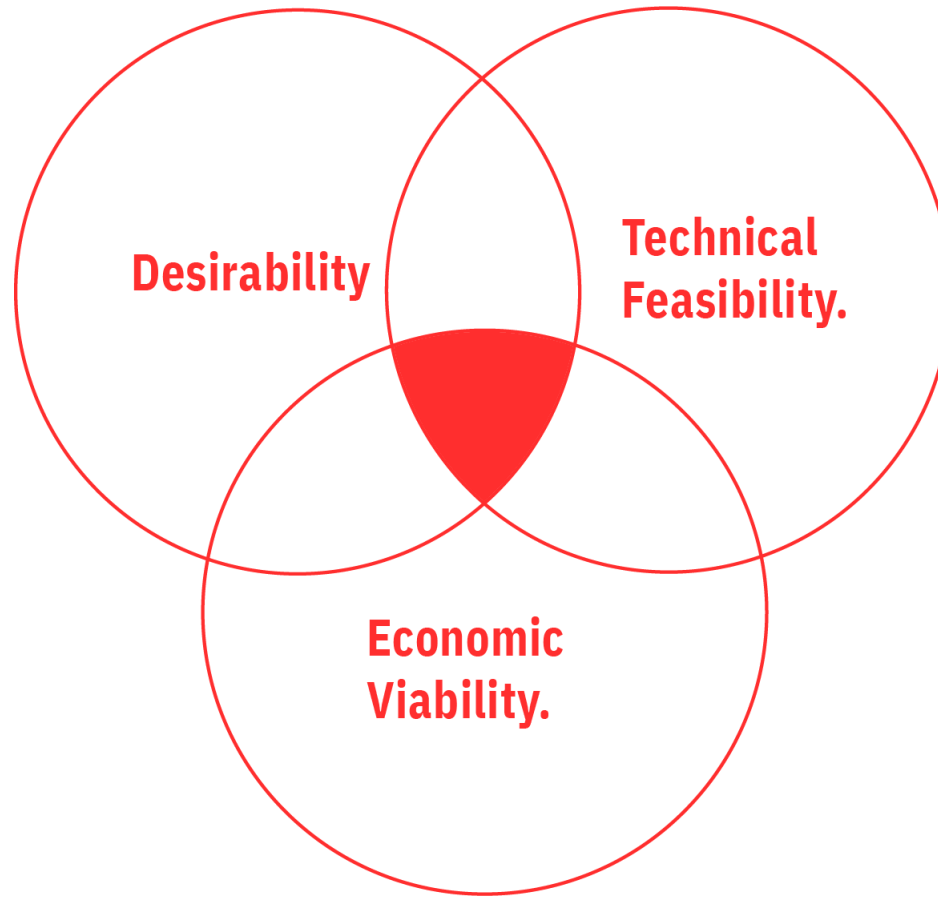

What Can We Design?

Systems

For example: How might we design an inclusive financial system?

Design Thinking Approach

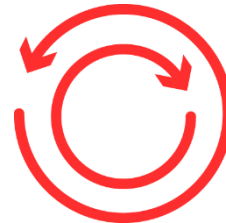

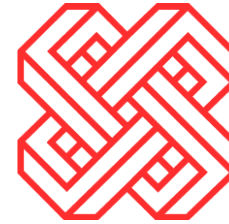

Why is Design Thinking Important?

- Globally, 90% of startups fail (Forbes) and the number one reason is market failure: “They make products no one wants.” (Fortune).
- In African markets, reaching mass market consumers requires developing products and services that are built to address their specific needs - often these products and business models do not exist elsewhere
- 71% of respondents surveyed about design thinking report that it improved their working culture on a team level¹
- 69% of respondents perceive the innovation process to be more efficient with design thinking¹
- In the age of Artificial Intelligence, “The new smart will be determined not by what or how you know but by the quality of your thinking, listening, relating, collaborating, and learning.”²

1. Research conducted by the Hasso Plattner Institut and the Stanford Design School

2. Ed Hess, as published in the Harvard Business Review, 2017. <https://hbr.org/2017/01/africas-new-generation-of-innovators>

Design Thinking Mindsets

Discussion

- Total time: 5 minutes
- Turn to the person next to you
- Each person share one example of something you have recently encountered that was either:
 - Designed well
 - Could have been designed better
- Describe what aspects of the design (or lack thereof) stand out to you

Homework: Question Everything

- Tonight, observe human behaviour
- What is working? What is not? Do you see patterns that indicate needs?
- Snap a picture or make a note about any interesting observations (ask permission before photographing people)
- Share your observation in the WhatsApp group before 8:30am tomorrow
